

HARVARD BUSINESS LAW REVIEW

WILL NASDAQ’S DIVERSITY RULES HARM INVESTORS?

Jesse M. Fried[†]

Recommended Citation: Jesse M. Fried, *Will Nasdaq’s Diversity Rules Harm Investors*, 12 HARV. BUS. L. REV. ONLINE, art. 1, 2021, at 1.

Abstract

In August 2021, the Securities and Exchange Commission approved Nasdaq’s proposed rules related to diversity. The rules’ aim is for most Nasdaq-listed firms to have at least one director self-identifying as female and another self-identifying as an underrepresented minority or LGBTQ+. While Nasdaq claims these rules will benefit investors, the empirical evidence provides little support for the claim that gender or ethnic diversity in the boardroom increases shareholder value. In fact, rigorous scholarship—much of it by leading female economists—suggests that increasing board diversity can actually lead to lower share prices. The implementation of Nasdaq’s proposed rules thus may well generate risks for investors.

Introduction

COVID-19 and the terrible events of 2020, including the killing of George Floyd, have brought into sharp focus many of the ills afflicting American society—such as systemic racism and sexism. Individuals and institutions have commendably mobilized to address these stubborn problems. But some such efforts, though well-intentioned, may well generate collateral damage. A case in point: the diversity rules proposed by Nasdaq¹ in December 2020 and approved by the Securities and Exchange Commission (“SEC”) in August 2021.²

The aim of these rules is for Nasdaq-listed firms to have at least one director self-identifying as female and another self-identifying as an underrepresented minority or LGBTQ+.³ In its December 2020 proposal, Nasdaq indicated that, to avoid forced delisting, a firm must “diversify or explain”: either have two such diverse directors, or say why it does not.⁴ Nasdaq also wants firms to disclose *every* director’s self-identified race, gender, and LGBTQ+ status.⁵

In February 2021, Nasdaq amended its proposal,⁶ loosening it in various respects. Among other things, boards with five or fewer members now need (or explain why they lack) only one diverse member, not two;⁷ newly listed firms have a longer phase-in period;⁸ and firms that unexpectedly lose a diverse director are given a grace period before being considered noncompliant.⁹

In proposing the rules, Nasdaq knew that appealing to social justice would not be enough; it justified the proposed rules by claiming they will benefit investors. According to Nasdaq CEO Adena Friedman, “there are many studies that indicate that having a more diverse board . . . improves the financial performance of a company.”¹⁰ Nasdaq’s 271-page proposal¹¹ to the SEC cites numerous studies in an attempt to support this claim.

However, a close look at these studies, as well as studies that Nasdaq fails to cite, suggests that increasing board diversity may well reduce investors' returns.¹² Part I considers the studies cited by Nasdaq, showing that these studies actually provide little support for the claim that gender or ethnic diversity in the boardroom increases shareholder value. Part II explains that Nasdaq curiously ignores rigorous scholarship—much of it by leading female economists—which suggests that increasing board diversity can actually lead to lower share prices.¹³ Part III explains why large asset managers' support for Nasdaq's diversity proposal does not necessarily mean the proposal is good for their own investors, or for retail shareholders directly owning shares of public firms.

Of course, no academic study (or set of studies) can prove beyond doubt that Nasdaq's proposed rules will harm or benefit shareholders. Nobody has run this precise experiment before; economists will not know the effects of these rules for months or years. But a fair review of the evidence suggests that Nasdaq's diversity rules create real downside risks for investors—risks that Nasdaq does not honestly confront. Thus, Nasdaq's pursuit of social justice objectives may well cause collateral damage to investors.

I. The Evidence Offered by Nasdaq

For evidence of the link between diverse boards and stock returns, Nasdaq relies almost entirely on reports—prepared by consulting and financial firms for marketing purposes—that claim to find a *correlation* between the two.¹⁴ But these reports are not academic studies; rather, they are marketing materials crafted to attract paying clients, presumably those seeking to “do good while doing well.”

More importantly, correlation does not imply causation. Other factors, such as firm size or industry, could explain both higher returns and a more diverse board. For example, certain industries may have a larger pool of qualified diverse director candidates, and those industries might also (for separate reasons) happen to out-perform. Or, as Deborah Rhode and Amanda Packel point out, more successful firms may be better able to attract female and minority

¹² Most investors invest in the stock market, either directly or through asset managers such as BlackRock, for the primary if not exclusive purpose of generating returns to pay for their retirement and other expenses. By “investors,” I mean “return-seeking investors.”

candidates in high demand for board service.¹⁵ To prove causation, sophisticated statistical techniques are needed to control for omitted variables of this kind.

On the link between diversity and shareholder value, Nasdaq cites only three sources that go beyond mere correlation.¹⁶ The first is a terse claim made by The Carlyle Group in marketing materials.¹⁷ Because the data and methodology are not disclosed, and the analysis is not subject to academic peer review, the claim cannot be assessed and relied upon. The second is a 2003 academic paper¹⁸ whose failure to adequately control for omitted variables was subsequently noted in a leading finance journal.¹⁹ The third is a high-quality study (one good enough to be published in a top finance or economics journal) that shows a positive effect of board diversity on shareholder value.²⁰ But this high-quality study measures diversity as a single variable that blends together six ingredients—gender, ethnicity, age, college attended, financial expertise, and other board experience.²¹ The results from this study generally hold even when any one of the individual components is omitted.²² Thus, the paper cannot show that gender or ethnic diversity of the board improves financial performance.

To be sure, Nasdaq describes various studies showing that diverse boards are associated with (or in some cases, cause) better corporate governance metrics, such as increased board attendance and improved financial reporting quality.²³ But even if diverse boards cause better corporate governance outcomes, these effects matter to investors if, *and only if*, they translate into better bottom-line results: higher stock prices.

To see why, consider an investor choosing between (i) a firm that delivers a 12% return with worse board attendance and (ii) a firm that delivers a 10% return with better board attendance. The investor will obviously choose the former over the latter. Better board attendance or other desirable corporate governance outcomes (such as improved financial reporting quality) cannot, by themselves, finance one's retirement. At the end of the day, returns are what count for investors.

L.J. 145, 162–64 (2019).

II. The Meaningful Evidence Ignored by Nasdaq

Nasdaq cannot cite any high-quality study showing that gender or ethnic diversity at the board level boosts returns, because there has been none.²⁴ In fact, there is a sizeable body of academic work reporting the opposite result: diversifying boards can harm financial performance. Troublingly, Nasdaq fails to engage with—or even report—this evidence. I first describe this evidence (Section A) and then discuss its applicability to Nasdaq's proposed rules (Section B).

A. Ignored Evidence

High-quality academic studies suggest that board diversity can harm shareholders, but Nasdaq ignores this information.

1. Evidence That Board Diversity Impairs Firm Performance

One of the leading papers on the effects of board diversity is a 2009 study of almost 2,000 U.S. firms by Renee Adams and Daniel Ferreira.²⁵ Nasdaq is obviously aware of the work; it repeatedly highlights the paper's findings that boards with female directors have better attendance records and impose greater oversight over CEOs.²⁶ But Nasdaq omits the paper's bottom line: "the average effect of gender diversity on firm performance is negative."²⁷ Why? Apparently, greater gender diversity in boards leads to excessive monitoring of executives.²⁸ The paper's key finding is problematic for Nasdaq. But that does not excuse Nasdaq's failure to acknowledge it.

2. Evidence That Pressuring Boards to Diversify Harms Investors

Nasdaq also fails to note several studies demonstrating that stock returns suffer when firms are pressured to hire new directors for diversity reasons. A famous 2012 paper by Kenneth Ahern and Amy Dittmar, published in one of the world's leading economics journals, focuses on Norway's 2003 board gender law.²⁹ The paper shows that the law caused an immediate 3.5% decrease in the stock prices of firms without female directors; these firms' stock prices remained

²⁴ A recently circulated working paper claims, based on a study of the effects of gender quotas throughout Europe, that adding women to boards increases shareholder returns. See Olga Kuzmina & Valentina Melentyeva, *Gender Diversity in Corporate Boards: Evidence From Quota-Implied Discontinuities 1* (Zentrum für Europäische Wirtschaftsforschung – Leibniz Ctr. for Eur. Econ. Rsch., Working Paper No. 21-023, 2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3805617. If these results survive peer review at a leading finance or economics journal, this will be the first high-quality study showing that board gender diversity boosts returns.

²⁷ See Adams & Ferreira, *supra* note 13, at 291.

²⁸ See *id.* at 307 ("Our interpretation of the results is that gender-diverse boards appear to be tougher monitors.").

²⁹ See Ahern & Dittmar, *supra* note 13, at 137.

low over the next few years.³⁰ The apparent reason: investors expected firms to replace more experienced male directors with less experienced female ones.³¹

Turning back to America, several recent papers examine California's 2018 board gender law.³² The law requires publicly-listed firms with California headquarters to have elected at least one female director by the end of 2019, and up to three, depending on the board size, by the end of 2021.³³ Firms can avoid complying by paying penalties that, for a public company, are relatively modest, between \$100,000 and \$900,000 per year.³⁴ For many firms, this is less than the cost of adding an additional board member.

But California's law, like Nasdaq's proposal, publicizes noncompliance to 'name and shame' firms into diversifying.³⁵ The law's announcement caused stock prices of affected firms to drop by a market-adjusted 2.6%, with a mean value loss of \$328.31 million.³⁶ This far exceeds the present value of potential noncompliance penalties. The paper partially attributes the decrease to the costs associated with changing boards.³⁷ But it could also reflect beliefs that, as prior work suggests,³⁸ a more diverse board can harm performance. Other papers report similar findings.³⁹

Perhaps the market's immediate reaction to the California law was wrong-headed. Maybe the California law will actually increase (or at least not reduce) shareholder value. Maybe the market was spooked by California's intervention in corporate governance, and expected worse down the road. But investors generally have strong incentives to get things right; stock price reactions to the announcements of new rules are considered highly probative of the effects of these rules on shareholder value.⁴⁰

³⁰ *Id.* at 139-40; accord David A. Matsa & Amalia R. Miller, *A Female Style in Corporate Leadership? Evidence From Quotas*, 5 AM. ECON. J.: APPLIED ECON. 136, 144-48, 146 tbl.3 (2013) (reporting that the effect of Norway's gender rule was to reduce firm profitability). *But see* B. Espen Eckbo et al., *Valuation Effects of Norway's Board Gender-Quota Law Revisited*, MAN. SCI. (forthcoming 2021) (manuscript at 1, 3-4), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2746786&download=yes (questioning the magnitude of some of these results).

³¹ *See* Ahern & Dittmar, *supra* note 13, at 140-41 (noting that new female directors were younger and had less CEO experience).

³² *See* Greene et al., *supra* note 13; Sunwoo Hwang et al., *Mandating Women on Boards: Evidence From the United States* (Kenan Inst. Priv. of Enter. Rsch., Paper No. 18-34, 2018), <https://ssrn.com/abstract=3265783>. Felix von Meyerinck et al., *As California Goes, So Goes the Nation? Board Gender Quotas and Shareholders' Distaste of Government Interventions* (Eur. Corp. Governance Inst., Finance Working Paper 785/2021, 2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3303798.

³³ *See* CAL. CORP. CODE §§ 301.3(a)-(b), 2115.5 (West 2021).

³⁵ *See* CAL. CORP. CODE §§ 301.3(c)-(d), 2115.5 (West 2021).

³⁶ Von Meyerinck et al., *supra* note 32, at 3.

³⁷ To understand how the law can inflict transition costs on firms, consider a hypothetical San Diego biotech firm. Suppose each of its five male directors has a unique skill set needed to commercialize the firm's cancer drug, and the firm does not need any more directors. To satisfy California's new gender law, the firm now must replace one current director with a woman, or add an unneeded sixth board member. Substituting directors is costly, in part because the incoming director, regardless of gender, lacks the outgoing director's knowledge of the firm. Adding and paying for a superfluous sixth is also costly. Either way, the firm's investors should expect to lose from the law.

³⁸ *See* Adams & Ferreira, *supra* note 13.

³⁹ *See, e.g.*, Greene et al., *supra* note 13; Hwang et al., *supra* note 32.

⁴⁰ *See, e.g.*, Merritt B. Fox, *Measuring Share Price Accuracy*, 1 BERKELEY BUS. L.J. 113, 115 n.5 (2004).

Nasdaq says it “believes that the academic studies support the conclusion that board diversity does not have adverse effects on company financial performance.”⁴¹ But many studies showing a causal effect, most of which Nasdaq fails to even cite, reach the opposite conclusion.

B. Applicability to Nasdaq

The studies mentioned above cannot prove that adhering to Nasdaq’s diversity target will harm investors. But they do raise a red flag.

Nasdaq could argue that its proposed rules, unlike California’s gender law, do not actually require a firm to change its board or pay a penalty. A firm always has the option of leaving the board unchanged and explaining why the board is insufficiently diverse. From investors’ perspective, Nasdaq’s rules ideally would lead to changes in boards only when increasing diversity improves—or at least does not harm—financial performance. Otherwise, boards would remain unaffected.

But can investors count on this rosy result? Not necessarily. The sharply negative stock-price reaction to California’s law cannot be explained by the modest penalties imposed on non-compliant firms. But it is consistent with an expectation that directors, fearing controversy, will be improperly pressured into making board changes that harm shareholders.⁴² Nasdaq’s rules—including its request for every director’s “diversity” status—are designed to have this same “naming and shaming” effect. Many boards will feel that explaining their lack of diversity is not actually a feasible alternative to complying. Nasdaq appears to acknowledge this intention in the title of its press release, which indicates the goal of increasing diversity rather than merely disclosing it: *Nasdaq to Advance Diversity through New Proposed Listing Requirements*.⁴³

The fact that Nasdaq felt compelled to modify its proposed rules in February 2021 demonstrates that explaining is often not seen by boards as an adequate alternative to complying.⁴⁴ The modifications loosen Nasdaq’s requirements by (among other things) lowering the diversity target for small boards and allowing a “cure” period for boards that unexpectedly lose a diverse member.⁴⁵ This loosening would not be necessary if directors believed they could opt for the “explain” option when the firm inadvertently fails to meet Nasdaq’s target without facing reputational damage (e.g., “we have only one diverse director because our second diverse director became ill and resigned”). The fact that Nasdaq felt pressure from firms to loosen the requirements shows that directors are eager to avoid being labelled non-compliant, even if non-compliance is easy to explain.

⁴¹ Nasdaq Filing, *supra* note 11, at 22.

⁴² Fear of adverse publicity can cause directors to take steps that harm shareholders. *See* Alex Edmans et al., *CEO Compensation: Evidence from the Field 3* (Eur. Corp. Gov. Inst., Finance Working Paper No. 771, 2021), https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3877391 (reporting that 67% of directors surveyed would sacrifice shareholder value by giving CEO suboptimal compensation arrangements to avoid controversy over CEO pay).

⁴³ *See* Press Release, Nasdaq Stock Mkt. LLC, *Nasdaq to Advance Diversity through New Proposed Listing Requirements* (Dec. 1, 2020), <https://www.nasdaq.com/press-release/nasdaq-to-advance-diversity-through-new-proposed-listing-requirements-2020-12-01>.

⁴⁴ Nasdaq Response, *supra* note 6, at 1.

⁴⁵ *Id.* at 86–87.

To the extent that directors feel compelled to comply with Nasdaq's diversity target and investors continue to see the diversification boards as value-destroying, the implementation of Nasdaq's diversity rules can be expected to cause market-adjusted declines in the share prices of affected firms.

III. What Can Be Inferred From Asset Managers' Support for Diversity?

In justifying its diversity proposal, Nasdaq notes that investors such as Vanguard, State Street Advisors, and BlackRock "include board diversity expectations in their engagement and proxy voting guidelines."⁴⁶ Does this mean that these asset managers believe, notwithstanding the studies described above, that pressuring firms to diversify boards increases shareholder returns? Not necessarily. Return-seeking investors have different interests around these proposed rules than asset managers, particularly index fund operators. Index fund managers are likely to benefit financially from Nasdaq's diversity rules, even if they have no effect on stock prices. Why? They facilitate governance activism used to attract assets from a particular subset of market participants—socially-minded millennials and pension fund stewards. This in turn increases managers' fees.⁴⁷

Indeed, asset managers' compensation structures may well incentivize them to engage in asset-attracting activism even when it reduces the value of firms in their portfolios. For example, an index fund operator will benefit from engaging in activism that sacrifices 1% of aggregate portfolio company value but attracts 2% more in managed assets.⁴⁸ Thus, one cannot infer from asset manager support for Nasdaq's diversity rules that the rules will benefit return-seeking investors.

Conclusion

Many individuals and institutions are mobilizing to address various social ills in America, such as systemic racism and sexism. Nasdaq's proposed diversity rules may well have desirable social effects, but we should not pretend that, conveniently, these rules will also benefit investors. High-quality scholarship, including a study Nasdaq itself cites and several studies that Nasdaq ignores, tends to point in the opposite direction. As Nasdaq begins implementing its diversity rules, do not expect investors to cheer.
